Summary. *Strongylium clavipes* Mäklin, 1864 is transferred from *Strongylium* (tribe Stenochiini) to *Pigeus* (tribe Cnодalonini) and new combination is proposed: *Pigeus clavipes* (Mäklin, 1864), comb. n. An annotated list of the species of the genus *Pigeus* Gebien, 1919 is also given.

Key words: Tenebrionidae, Stenochiini, Cnодalonini, *Strongylium*, *Pigeus*, taxonomy, new combination, Asia.

Я. Ц. Юань^{1, 3)}, Г. Д. Рен^{1*}, К. Масумото²⁾. О таксономическом положении *Strongylium clavipes* Mäklin, 1864 (Coleoptera: Tenebrionidae) // Дальневосточный энтомолог. 2015. N 295. С. 12-14.

Резюме. *Strongylium clavipes* Mäklin, 1864 перенесен из рода *Strongylium* (триба Stenochiini) в род *Pigeus* (триба Cnодalonini), в силу чего предложена новая комбинация: *Pigeus clavipes* (Mäklin, 1864), comb. n. Приведен аннотированный список видов рода *Pigeus* Gebien, 1919.

In his monograph, Mäklin (1864) described *Strongylium clavipes* from China. Later, Gebien (1942) and Löbl *et al.* (2008) followed this treatment and included this species in the genus *Strongylium*. The photo of the type specimen of *S. clavipes* deposited in the Zoological Museum, University of Copenhagen, Denmark was obtained by the first author in the course of hers study of the Chinese Stenochiini. It allows us to clarify the real taxonomic position of this species.

TAXONOMY

Genus *Pigeus* Gebien, 1919

Pigeus Gebien, 1919: 153. Type species: *Camarimena nitidipes* Fairmaire, 1893

Pseudocamarimena Pic, 1923: 21. Type species *Pseudocamarimena striata* Pic, 1923. Synonymized by Kaszab, 1984: 363.

COMPOSITION. The genus consists of four species distributed in Asia (Gebien, 1919; Kaszab, 1984; Löbl *et al.*, 2008). Here one species is transferred from *Strongylium* to *Pigeus*. An annotated list of these species is given below.

Pigeus clavipes (Mäklin, 1864), comb. n.

Fig. 1

Strongylium clavipes Mäklin, 1864: 439.

DISTRIBUTION. China (Shanghai).

NOTES. This species resembles the genus *Strongylium* in the elongated and subcylindrical body, but differs from latter (as well as from all other genera of the tribe Stenochiini) by eyes much smaller, distance between eyes in dorsal view greater than diameter of one eye; ventral side of tarsomeres with dense tomentose, which are typical for tribe Cnadaloniini. By subcylindrical body this species belongs to the Camarine group of Cnadaloniini, and somewhat resembles *Camarimena*, but can be distinguished from latter by the filiform long antennae and by the empodium with two hairs (Gebien, 1919) and undoubtedly must be placed in the genus *Pigeus*.

Fig. 1. Type of *Pigeus clavipes* (Mäklin, 1864), dorsal view.

Pigeus marimena Kaszab, 1984

Pigeus marimena Kaszab, 1984: 366.

DISTRIBUTION. Vietnam.

Pigeus nitidipes (Fairmaire, 1893)

Camarimena nitidipes Fairmaire, 1893: 298.

Pigeus nitidipes, Gebien, 1919: 154.

Pseudocamarimena tonkinea Pic, 1927: 18. Synonymized by Kaszab, 1984: 363.

DISTRIBUTION. Vientam (Lang-Song, Chapa).

Pigeus rugosistriata (Blair, 1913)

Camarimena rugosistriata Blair, 1913: 58.

Pigeus rugosistriata: Gebien, 1919: 154.

DISTRIBUTION. India.

***Pigeus striata* (Pic, 1923)**

Pseudocamarimena striata Pic, 1923: 22.

Pigeus striata: Kaszab, 1984: 363.

DISTRIBUTION. China (Shanghai).

ACKNOWLEDGEMENTS

We wish to thank Dr. Alexey Solodovnikov and Ms. Cecilie Svenningsen, Zoological Museum, University of Copenhagen, Denmark, for their kind help to take the photo of type. Thanks are due to Dr. Shûhei Nomura, the National Museum of Natural and Science, Tokyo, Japan, who very helpfully supported first author when she visited this museum, and Dr. Ottó Merkl, Hungarian Natural History Museum, Budapest, for his invaluable advice. The present investigation was supported by the grants of the National Natural Foundation of China (No. 31093430) and the High-level university construction projects of Shaanxi Province (No. 2012SXTS03).
